

T7® Technical Bulletin

Bulletin number:	2016-01	Contact:	Technology Member Services
Date:	January 15, 2016	Telephone:	212-897-0244

The purpose of this bulletin is to inform members about the implementation of the **binary** Depth feed and decommissioning of FAST format feeds on both ISE and ISE Gemini exchanges.

Binary Depth Feed Rollout

On Friday, **January 22, 2016**, ISE will enable a binary Depth feed in production for both ISE and ISE Gemini exchanges.

Friday, January 22, 2016:

- Depth Feed — Simple Instruments
- Depth Feed — Complex Instruments (ISE Only)

Binary Multicast IP Addresses and Ports

The latest binary Depth feed message specification, production binary multicast configuration details, and IP addresses and ports can be found in the **MDI Programming Manual, ver. 10.0.0** (or higher), available on the member web site at <https://members.ise.com>.

Market Data Channel Assignments

On the given date, market data for instruments of the specified type in *all* products will be enabled.

The specific market data channel to which a product's instruments are assigned is found in the **Product Snapshot** message on the Reference Data feed. The binary feed channels are identified by the *MDFeedType* field with a value ending in the letter "B". For example, the *MDFeedType* value for the simple top quote binary feed is "TBSB".

For a complete list of *MDFeedType* values, please see the *MDI Programming Manual*.

FAST Market Data Feeds Decommission

Effective Monday, **April 25, 2016**, ISE will no longer publish FAST format Depth, Order, Spread and Reference data feeds on both ISE and ISE Gemini exchanges. Members actively using these feeds must complete their migration to binary format before the cutoff date.

Feeds to be decommissioned, Monday, April 25, 2016:

- Depth Feed — Simple and complex Instruments
- Order Feed— Simple Instruments
- Spread Feed — Complex Instruments (ISE Only)
- Reference Data Feed

Further Information
